

Survey of Immigrant Patients or Parentage Ethnicity at the St. Peter St. Hospital for the Insane

Based on 1930 U.S. Census of the "Minnesota Hospital" in St. Peter, Nicollet County

By J. & R. Molony 9/17/2021

Note 1: This survey takes into consideration two generations of ethnic identification. First-generation patients, born in the U.S., are counted by their country of ethnicity via parentage, as reported on the census record.

Note 2: This survey is inherently flawed because it is dependant on historically erroneous census-taking methods and the influence of civil wars, world wars, country mergers, and the fall of kingdoms pertinent to one's reported country of origin.

Table 1 of 2: Showing results *combining* the states within the German Confederation and succeeding Empire, *prior* to the effects of WWI and reconstruction from 1919-1923.
